

## My Stream

**My Stream** addresses the challenges of managing personal media libraries in an era where content is distributed across multiple streaming platforms. The motivation behind creating My Stream stems from my own experiences with media consumption. As a frequent consumer of movies and series, I often found myself frustrated by the difficulty of tracking what I had watched and what I wanted to watch, especially as I had accounts in the 4 big streaming platform in the Philippines (Netflix, HBO GO, Prime, and Disney+). With various titles available on different platforms, it became increasingly challenging to keep my media collection organized. This annoyance sparked the development of My Stream, a user-friendly platform designed to simplify the management of movies and series. By developing My Stream, I aimed to create a solution that not only alleviates my frustrations but also enhances the viewing experience for others facing similar challenges.

My Stream intends to offer several features that enhance the user experience:

1. **Watched and Unwatched Content Tracking:** Users can easily mark movies and series as watched or unwatched. This feature allows individuals to monitor their viewing progress and quickly identify new content to explore.
2. **Watchlist Management:** The platform enables users to add movies and series to a watchlist, making it easier to remember titles they wish to watch in the future. This addresses the common frustration of forgetting recommended content.
3. **Streaming Platform Information:** Each title displays the streaming platforms where it is available, helping users find their desired content without the need to jump between different services. This feature is particularly valuable in today's fragmented media landscape.
4. **Organized Media Library:** The project categorizes movies and series into distinct sections: watched, unwatched, and watchlist. This structured layout provides a clear overview of the user's collection, making it easy to navigate and find specific titles.

My Stream is designed to address the complexities of managing personal media collections in an increasingly fragmented streaming environment. By providing tools to track watched and unwatched content, manage a watchlist, and access essential streaming platform information, this project aims to simplify the media management experience. It is my hope that My Stream will serve as a valuable resource for anyone navigating the challenges of modern media consumption, making it easier to enjoy the content they love.

NOTES (Things I wanted to do but lacked the time to):

- > Actual access to a database where movies/series were already available and connected to their respective streaming platform.
- > Allowing for users to track individual episodes of series.
- > Allowing recommendations based on the user's viewing history and preferences.
